FIT HUB CRM – FITNESS CENTER MANAGEMENT SYSTEM

1. Understand the Goal

You need to build a **Fitness Center Management System (FitHub CRM)** that:

- Automates member registration and management
- Tracks attendance and workout activities
- Manages membership plans and payments
- Improves customer experience
- Ensures data security
- Provides reports and analytics

---

2. Design the Data Model (VERY IMPORTANT)

Start with main **objects (tables):**

Core Objects

- Member
- Trainer
- Membership
- Payment
- Attendance
- Workout Plan
- Diet Plan (optional)

Relationships

- One Member → Many Memberships
- One Trainer → Many Members
- One Member → Many Attendance Records
- One Membership → One Payment

Example

Member

- Member ID
- Name
- Age
- Contact
- Join Date

Membership

- Plan Type
- Start Date
- End Date
- Status

---

3. Create Fields

Member Object

- Name
- Age
- Phone Number
- Email
- Address

Membership Object

- Plan Type (Monthly / Yearly)
- Start Date
- End Date
- Status (Active / Expired)

Payment Object

- Amount
- Payment Date

- Payment Mode

---

4. Formula Fields

Use formulas for automation:

- **Membership Duration** = End Date – Start Date
- **Remaining Days** = End Date – TODAY()
- **BMI Calculation (optional)** = Weight / (Height × Height)

---

5. Validation Rules

Prevent wrong data entry:

- Age must be greater than 0
- Payment amount must be positive
- Membership end date must be after start date

Example:

If End Date < Start Date → Show Error:
"Invalid Membership Duration"

---

6. Automation (Process Builder / Flow)

When Member Registers

- Create membership record automatically
- Assign trainer
- Send welcome email

When Membership is Expiring

- Send reminder notification

When Payment is Completed

- Update membership status to “Active”

When Member Checks In

- Update attendance automatically

---

7. Apex (IMPORTANT for Project)

Use Apex for complex logic.

Trigger Example

Update membership after payment:

```
for(Payment p : Trigger.new){
  Membership m = getMembership(p.MemberId);
  m.Status = 'Active';
  update m;
}
```

Apex Class

- Handle notifications
- Manage trainer assignment

Test Class

- Ensure minimum 75% code coverage

---

8. Security (VERY IMPORTANT)

Profiles & Roles

- Admin
- Trainer
- Receptionist

Field-Level Security

- Hide payment details from trainers

Sharing Rules

- Only assigned trainers can view member details

---

9. User Management

- Create users
- Assign roles
- Set permissions
- Manage login access

---

10. Reports & Dashboards

Reports

- Active Members
- Expired Memberships
- Monthly Revenue
- Attendance Reports

Dashboard

- Total Members
- Daily Attendance
- Revenue Overview
- Membership Growth

---

11. Integration (Basic Level)

- Email notifications
- SMS alerts for renewals
- Payment gateway integration (optional)

---

12. Final Use Case Flow (IMPORTANT)

Member registers

→ Membership created

→ Trainer assigned

→ Payment completed

→ Membership activated

→ Attendance tracked daily

→ Notifications sent

→ Reports updated

---

13. What You Should Submit

Your project should include:

- Data Model Diagram
- Objects & Fields List
- Automation (Flow / Process Builder)
- Apex Code + Test Class
- Security Setup
- Reports & Dashboard
- Use Case Explanation

Team Members:

1. NANDAGOPAL D
2. NAGABALAN N
3. ARCHANA J
4. NILOFER BANU S
